BEAVERWAX

BeaverWax was created in Ontario, Canada, in a local candle factory. Later moving to Vancouver, British Columbia, Canada, the founders understood the process and future developments of ski and snowboard wax and wanted to create a wax that was more environmentally sustainable without compromising performance.

An innovated wax containing environmentally friendly (FDA Approved) additives and the unique hand poured manufacturing process that's done in small batches, ensures that each bar of wax stays consistent with the right amount of additives.

Today, award-winning BeaverWax is regarded as one of the finest qualities of wax on the market. It has set new standards for the recreational wax industry and continues to improve the quality for its environmental sustainability.

All waxes are made and poured in Canada.
